

Delos Internet Expands Network to Dallas/ Fort Worth

Houston, Texas – March 22, 2011 - Delos Internet announced today that it has expanded its fiber and microwave network to the Dallas Fort Worth Metroplex. The company's first Dallas network POP (point-of-presence) will be located at 1600 Viceroy near Love Field. The eight story building will serve as a network hub for the company in addition to providing strategic rooftop antenna space for customers and network expansion.

"We continue to expand our network to areas where we see demand," said Ben Crawford, President of Delos Internet. "Many of our customers in Houston have offices or operations in Dallas, but unfortunately up until now we have had to refer them to other providers. Today I am pleased to say that this is no longer the case. Delos Internet can now deliver to companies in Dallas the same affordable and reliable high speed connectivity that they are used to in Houston."

Mr. Crawford also went on to say that further expansion of the network in the Metroplex is expected over the coming months, including likely hubs in downtown Dallas and Fort Worth. "We have always expanded to where the demand is, and this is no different. Our goal as a company is to provide service to as many large cities in Texas as we can, without sacrificing the service or dependability that our customers have become so used to."

Delos Internet is a provider of high speed Internet and private point-to-point data circuits to businesses throughout the Houston and now the Dallas Fort Worth area. The company owns and operates a state-of-the-art fixed microwave and fiber network with connectivity throughout the city. The company's high performance gigabit network provides a reliable alternative to traditional copper providers but with much faster speeds.
